

Numerous improvements in Polyphone 1.1, and an export in an sfz format.

### Changelog

- possibility to create velocity layers in the division duplication tool
- the global setting tool may deal with a particular velocity layer
- playing sounds is possible with the computer keyboard
- ctrl+C / ctrl+V now works like a drag & drop in the tree view
- copying a preset from one sf2 to another uses now - if possible - the same bank and preset numbers
- bugs related to the pitch correction and the endloop values are fixed when exporting a sample
- the rootkey of a sample is determined via its filename, if this information is not contained in the file
- the highest key is now 127 in the auto-divisioning tool
- sfz export
- the interface fits for smaller screens
- window state and geometry are restored
- keys may be held by the sustain pedal
- synth gain is controlled by the volume midi controller
- when editing a sample, option to change the linked sample if stereo
- possibility to change the audio buffer size
