

Polyphone document: Soundfont editor

When a soundfont is created or when an existing one is opened, a new tab containing a soundfont editor appears.

A soundfont editor is made of:

- a [tree](#) on the left, representing the architecture of the soundfont;
- a [toolbar](#) on the top (in blue in the picture);
- a main area that can either contain an [editing page](#) or an [configuration summary](#), depending on what is selected in the [tree](#).
